Networking

Your network is the foundation of your business

Don't let an aging network hold you back. Whether you want to migrate to the cloud, optimize for enterprise performance, or securely integrate disparate endpoints and cloud services, Blue Mantis Networking solutions help you achieve your goals.

Industry-leading technologies

Few networks use a single vendor's hardware. For over 30 years, Blue Mantis has partnered with Cisco, Fortinet, HPE Aruba, Palo Alto Networks, Zscaler, and other industry leaders to design and deliver custom future-ready networks for your desired business outcomes.

Enable secure cloud-first workforces

Workforces are distributed and mobile, but legacy networks are brittle and costly. Blue Mantis Networking solutions are secure, scalable, and software-defined, so you can adapt to the changing needs of tomorrow.

Blue Mantis Networking experts can seamlessly and securely connect your on-premise IT environment to the cloud and unleash the full potential of your business. All our networking solutions are built within the zero-trust security framework to increase security and simplify management of dispersed endpoints at scale. Our Carrier Services can even source managed bandwidth to your office locations for SD-WAN, SASE, and traditional network deployments.

Extend the life of legacy networks

You have sunk costs on legacy networking but need to add security and make everything automated. Blue Mantis Networking experts feature enhancements to legacy network equipment using proven digital transformation and network modernization designs. We can assess, implement, and monitor both wired and wireless solutions.

Top verticals for networking

Finance & Banking

Healthcare & Life Sciences

Business Services

Retail

Manufacturing

Public Sector

Take IT complexity off your plate

Network Assessments

Visualize the future state of your network with actionable results

Intent-Based Networking

Automate and secure networks at scale with micro-segmentation

SD-WAN & SASE

Enhance performance and security with dynamic networking

Zero Trust Networking

Enforce security on all endpoints without compromising productivity

Wireless LAN

Connect users and IoT devices with blazing-fast WiFi bandwidth

Enterprise Networking

Extend the life of legacy networking investments with proven solutions

51%

of all IT system infrastructure spending predicted to shift from traditional solutions to public cloud by 2025.
