

Canada Goose

How a Leading Luxury Retailer Strengthened Global Security Operations

- 1 hour saved per investigation
- 10 year product warranty
- A few minutes to configure alarms

Challenges

1. Reducing operational inefficiencies
2. Scaling global security operations with cloud-managed technology
3. Accelerating incident response time

Solutions

1. Easy to use platform
2. Efficient and high-quality deployment
3. Innovative approach to product

Why Verkada?

One system to centralize global security operations

“When collating data between cameras, doors, sensor and alarm events, it’s easy to get a full picture of what’s happening anywhere around the world. The user interface is well-designed and the centralized reporting helps speed up investigations.”

Comprehensive coverage with natively integrated solutions

“Verkada is easy to install and program to fit our needs. I love that granularity, from custom alarm settings to POS integrations through Helix.”

Asset protection with an integrated sensor network

“We have greater peace of mind because we’re alerted the moment that temperature or humidity in IT or stock rooms increase past a certain threshold. This helps mitigate an emergency before it can escalate.”

Actionable insights on an intuitive platform

“I have all our physical security systems available to me on my phone at the click of a button. That’s liberating to me, and increases our capacity to support our retail and manufacturing teams.”

Continuously improving technology

“I was impressed with new capabilities that were delivered over-the-air since my initial purchase. It’s a constant stream of innovation; I’m always interested to see what new capabilities come with each update.”

Devon King,
Senior Manager of Security Operations
