Security Awareness Training

Educate employees against phishing

Phishing attacks and ransomware payouts have reached an all-time high. Legacy security awareness training methods are no longer effective. To protect your employees, your customers, and your reputation, you need regular cybersecurity training.

Blue Mantis partnered with industry-leader KnowBe4 on a turnkey Security Awareness Training solution that safely simulates phishing attacks against your employees to establish awareness baselines and then trains your employees to spot social engineering attacks, resulting in a measurable cybersecurity posture increase.

Increase your security awareness

Blue Mantis deploys KnowBe4 Security Awareness Training solutions to give your employees unlimited access to the world's largest social engineering awareness training library. Training campaigns can be automatically scheduled and include interactive learning modules, videos, games, and more to match your employees' learning styles.

KnowBe4 Security Awareness Training includes a best-in-class and fully automated phishing simulation capability to safely provide your IT teams with real-world baseline metrics for all your employees. Administer your Security Awareness Training effectiveness from a single pane of glass interface that integrates with Microsoft Entra ID.

Benefits

- Teach employees from the world's largest library of always-fresh security awareness training content, featuring interactive content, videos, newsletters and more
- Integrates with Microsoft Entra ID and other enterprise identity providers along with SCORM-compliant video
- Test and track employee security awareness with 25,000 phishing templates for both email and phone

Reduce employee
susceptibility to
phishing by 81%
