Cloud Endpoint Orchestration

Unify IT Device Management While Enhancing Visibility and Control

According to recent industry reports, over 70% of organizations struggle with ensuring consistent security policies across employee devices—including physical laptops, smartphones, and even virtual desktops. Add hybrid cloud IT architectures and multiple authentication systems to the mix and these challenges not only increase security risks but also hinder operational efficiency.

Blue Mantis Cloud Endpoint Orchestration addresses these issues by empowering IT teams with enhanced visibility, robust security, and comprehensive control over all employee devices. Consolidate your identity and access management, streamline your device management, and fortify your corporate security all from a unified cloud-native management console.

Boost Security and Efficiency

Blue Mantis Cloud Endpoint Orchestration leverages Microsoft Entra ID and Microsoft Intune to deliver advanced cloud-native security and management to all Windows (physical and virtual), Mac, iOS, and Android endpoints connected to your corporate IT estate. Ideal for organizations still using Office 365 apps with multiple authentication and device management services, Cloud Endpoint Orchestration consolidates it all into a unified policy-based device and application management solution, enabling IT teams to streamline operations while maintaining stringent cybersecurity.

Business Benefits

- Reduce IT administrative overhead with a unified policy-based endpoint management solution.

- Gain complete visibility into all Windows, Mac, iOS, and Android platform devices.

- Enhance security by managing both corporate and employee-owned endpoints with a cloud-based platform that protects personal privacy, sensitive data, and maintains compliance.

Unified Management

Manage cross-platform mobile devices, desktops, and virtual endpoints from a single cloud-native platform, that ensures consistent IT policy enforcement.

Enhanced Security

Leverage Microsoft Entra ID for secure identity and access management, minimizing vulnerabilities and safeguarding organizational resources.

Strategic Transition

Seamlessly migrate to the advanced security and management capabilities of Microsoft 365 and Intune, to enhance operational efficiency and reduce risks.
